LIQUID SPRAYING

Application of all protective paintcoatings by airless or conventional spraying. Our services include all single pack epoxy coatings, two pack finishes and special coats to any specification.

Paint systems used in industry provide long life protection to various steel fabrications and components.

The systems are prepared by abrasive blasting to the highest standard followed by the application of multiple layers of paint.

Most paint systems are two pack from epoxy zinc primers for corrosion and chemical resistance to hard wearing epoxy undercoats and polyurethane gloss finishes.
