## SHOT BLASTING

*Shot blasting is a cleaning process for metals, working to B.S. and Swedish standards. We operate a manual blasting system and we can handle large or awkward shaped objects.*

*This process is used prior to metal spraying using chilled iron grit. The blasting will abrade the surface of the metal thus giving a key for the pure molten zinc or aluminium to adhere to it.*

*Shot Blasting will also remove any rust, scale, or existing paintwork prior to the application of primers or other decorative finishes.*
